Where are the threats?

Threat Intelligence

is the art of mapping your threats and "seeing" them before they occur so you can prepare.

1 Tactical Threat Intelligence

- Immediate threat focus e.g. malicious IPs, domains noted in the SOC.

2 Operational Threat Intelligence

- Learning more about your attackers/threats
- Focus on TTPs - Tactics, Techniques and Procedures, attacker behaviour etc.

3 Strategic Threat Intelligence

- Big picture thinking about the 'threat landscape.'
- An understanding of what might happen over time, who will hit us, why and how to think about security in the long-term.

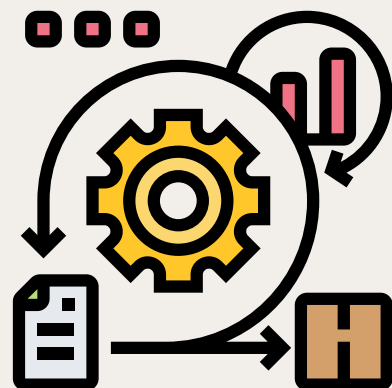

How: Threat Intelligence

Planning

- What exactly do we want out of our threat intelligence platform?
- How much will it cost?
- What do we want to learn and for how long?

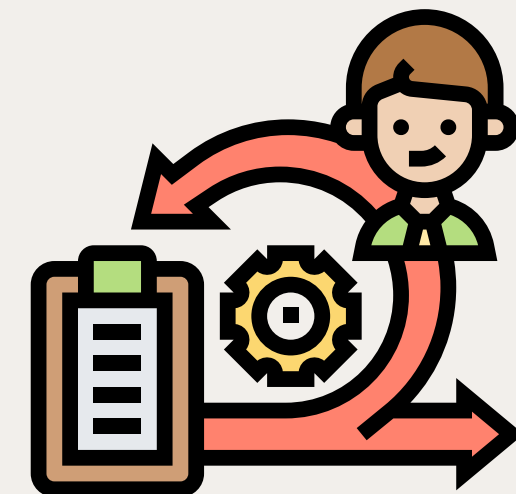

Collection

- This is where we collect data that answers all the questions we raised in the planning phase.
- e.g. common threats attacking our industry, tactics of key attackers, e.t.c.
- Tools really help with this.

Processing

- Data is pooled into resources such as a SOAR that can make sense of what it is seeing.
- Output can be refining the data to make more sense to the company's context.

How: Threat Intelligence

Analysis

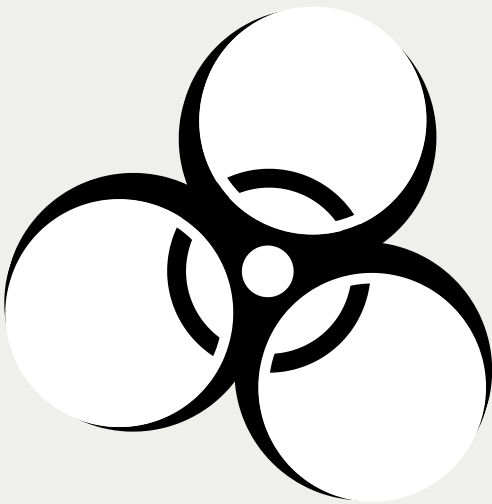

- This is where the real work happens. Data is assessed and insights are generated.
- Output can be reports, briefings, recommendations, additions to tools e.g. SIEMs

Feedback & Improvement

- This is where you determine whether the intelligence is meeting your requirements.
- e.g. if we invest \$5 million into a platform and still get hit, what did we miss?

Threat Actors: Practice

SCATTERED SPIDER

- Who are they?
- What are their tactics?
- What industries do they affect?

LAZARUS GROUP

- Who are they?
- What are their tactics?
- What industries do they affect?

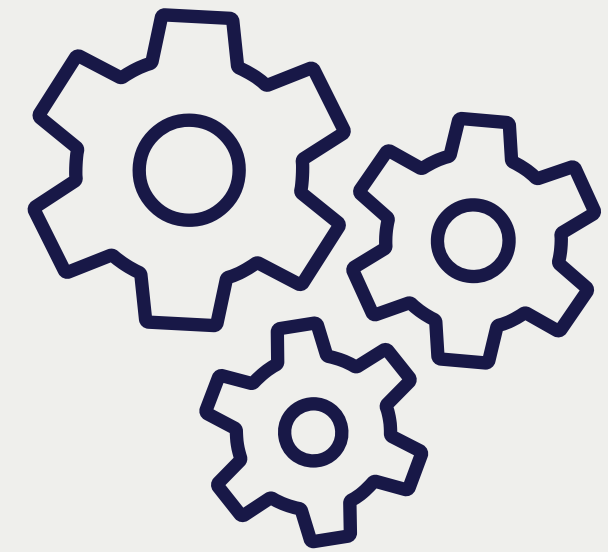

SALT TYPHOON

- Who are they?
- What are their tactics?
- What industries do they affect?

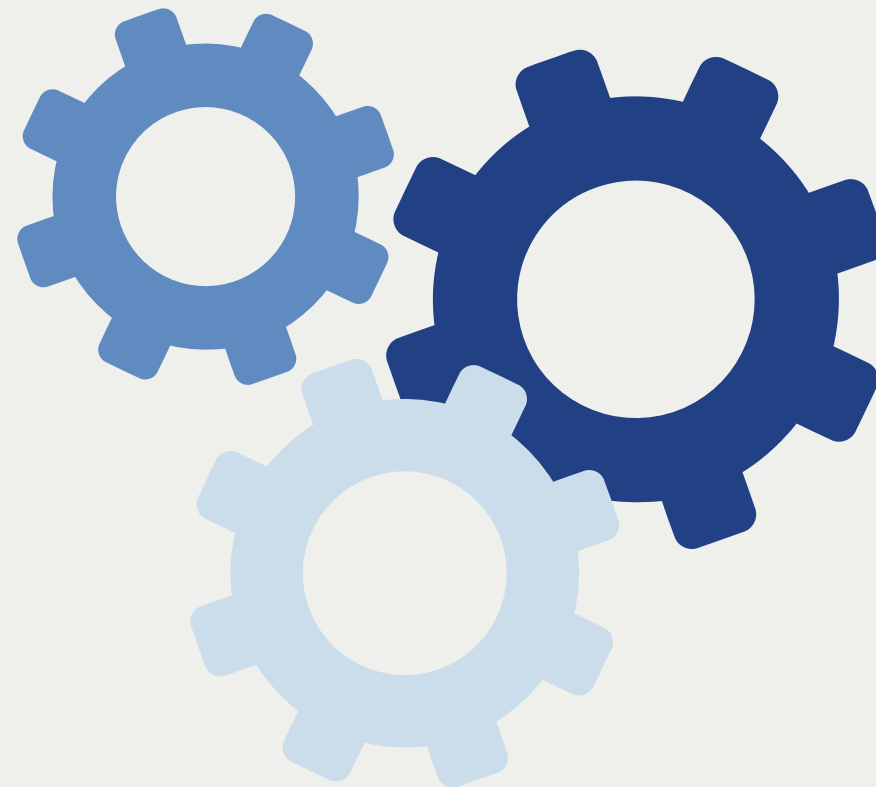

Tools used in threat intelligence
